

CELLMECH 2019

8th Biennial European Cell Mechanics Meeting
June 3-6, 2019 | IFOM - Milan, ITALY

Cell Mech is a conference that has been organised every other year in Europe for the last 15 years.

The conference series gathers biologists, mathematicians, physicists and engineers to discuss various aspects of cell mechanics. It has a strong focus on fostering interactions between students and established PIs in the field. The workshop format offers ample time for interactions and presentation of new or unpublished work.

This year will bring together people interested in biological forces from different origins (osmotic forces, cytoskeletal forces, compressive force from the microenvironment...) to foster a more integrated view of cell mechanics.
